

Early Warning®

# Asset Search and Verification<sup>SM</sup>

To reduce improper payments and better serve U.S. citizens, government agencies and their contracted resellers need a more efficient means for deciding program benefit applications. Asset Search and Verification<sup>SM</sup> leverages the National Shared Database<sup>SM</sup> from Early Warning to quickly and accurately identify a consumer's financial assets.

Visibility into more than 600 million checking accounts, savings accounts, CDs and IRAs

## How it works in real time

### Step 1

The agency submits an electronic request to Early Warning related to a government benefits inquiry.

### Step 2

Early Warning accesses its vast database resource to match all accounts and balances related to the inquiry—and returns a secure, detailed response in real-time.

### Step 3

The agency uses the Asset Search and Verification<sup>SM</sup> response intelligence to enable a timely and reliable benefits eligibility determination.
